The Benefits of Layering Medalist® Apparel with SilverMax®

Medalist apparel with SilverMax works most effectively as a scent elimination system when the base layer through outerwear is layered together. The SilverMax technology in Medalist apparel begins to work when you perspire. The base layer rapidly wicks the moisture away from the body through to the mid-layer and on through to the lining of the outerwear. All layers work together to deliver complimentary scent elimination benefits, keeping the wearer scent free.

In addition to superior scent-elimination, the benefit that distinguishes Medalist apparel with SilverMax vs. the competition is the thermodynamic body temperature regulation properties. The SilverMax in every layer of Medalist apparel is proven to increase the insulative and warmth characteristics, keeping the wearer more comfortable in all conditions.
